3. Product Description
BASIC USE: Merkrete 700 Premium Set is a professional grade portland cement thin set mortar for installing ceramic tile, quarry tile, pavers, and dimensionally stable natural stone. It is recommended for use in the thin set installation method for absorptive, and semi-vitreous tile over properly prepared masonry, concrete, and cement backer board. In dry areas, it is suitable for gypsum board.

Uses: 700 Premium Set can be used as a thin set mortar for ceramic tile and natural stone for both walls and floors in interior and exterior applications. It is used as a thin set from 3/32” to 3/16” (2.4 to 4.8 mm) after the tiles have been properly beat in. 700 Premium Set is suitable for both residential and light commercial construction. 700 Premium Set when mixed with Merkrete 150 Latex, 200 Latex, or Tuff Flex 442 additive can be used in the thin set installation method for porcelain, semi-vitreous and vitreous tile over properly prepared masonry, concrete, cement backer board, and existing ceramic tile. In interior dry areas, it is suitable for gypsum board and (EGP) plywood substrates.

Advantages
- Freeze thaw stable
- Interior and exterior
- Bonds to most surfaces
- Available in both gray and white colors. Exceeds ANSI A118.1 for portland cement mortar
- Exceeds ANSI 118.4 and A118.11 (EGP) for polymer modified portland cement mortar
- when mixed with Merkrete 150 Latex or Tuff Flex 442 additives

Suitable Substrates
- Brick masonry
- Cement backer board
- Cement mortar beds
- Cement plaster
- Cement terrazzo
- Ceramic tile and stone
- Concrete
- Concrete masonry
- Exterior grade plywood
- Gypsum wallboard
- Merkrete waterproofing/crack isolation membranes

1 Consult cement backer board manufacturer for installation recommendations and to verify acceptability for exterior use
2 When mixed with Merkrete 150 Latex or Tuff Flex 442
3 Interior use only

4. Technical Data
Applicable Standards: Merkrete 700 Premium Set meets or exceeds industry requirements ANSI A118.1 for portland cement mortar. Follow ANSI A108.5 for installation.

5. Installation

Surface Preparation: All surfaces must be between 40º F (4º C) to 95º F (35º C) and structurally sound (deflection not to exceed 1/360 of the span), dry, clean and free from oil, grease, wax, paint, old adhesives, sealers and curing compounds. Any contaminants which inhibit proper bond must be removed. Substrate preparation should be completed following ANSI A108 AN-2 “General Requirements for Sub-surfaces.” All substrates should be plumb and true, surface deviation should not exceed 1/4” in 10’. Patching, leveling or areas requiring a mortar bed should be prepared using Merkrete underlayments. Movement (expansion) joints should be provided to comply with TCA method EJ 171.

Substrates

Plywood Substrates: (Latex additive required during mixing) Maximum joist spacing should be 16” on center. Plywood should be exterior grade only. Maintain a gap of 3/16” between plywood underlayment sheets edges and all that abut walls, columns, posts and adjacent sheets. All plywood installations should be interior areas only and protected from exposure to moisture.

Cement Substrates: All concrete substrates should be cured a minimum of 28 days. Smooth steel troweled floors should be roughed up using mechanical chipping, scraping or shot blasting. Dampen porous or dry concrete previous to installation of tile. Do not leave puddles or standing water.

Cement Backer Board: Follow cement board manufacturer's instructions.

Mixing: In a clean container, add approximately 5 quarts (4.7 liters) of clean potable water (or Merkrete Latex additives). Then add the contents of the 50 lb. (22.7 kg.) 700 Premium Set mortar. Mix thoroughly by hand or with a slow speed mixer to a smooth, thick, trowelable consistency. Allow mortar to slake for approximately 15 minutes, and then remix before using. Remix without adding additional water or powder. Mortar consistency shall be such that when applied with the recommended notched trowel to the substrate, the ridges formed in the mortar do not flow or slump. During use, stir mortar mix occasionally. Do not temper with additional water.

Application: Apply mortar to the substrate with the flat side of the trowel, with enough pressure to firmly work into the surface. With a notched trowel, immediately follow with a heavier coat of material using the appropriate trowel and enough mortar to provide 100% coverage to the back of the tile. Some extruded or lug back tiles back-buttering of tiles may be required. Do not spread more mortar then can be covered in 20 minutes or before the mortar skins over. It is advised that during the installation, remove a tile to insure the mortar has not skinned over and check the tile and substrate mortar coverage. Comb the mortar using an appropriate notched trowel in one direction. Place tiles in mortar, slide back and forth perpendicular to the ridges to insure proper coverage. Do not adjust tiles set in mortar after 15 minutes.

Limitations: Do not use 700 Premium Set below 40º F (4º C) or above 95º F (35º C). Use caution; do not allow mortar to freeze for the first 72 hours. Do not soak tiles previous to installation. 700 Premium Set must not be used to apply over asphalt sheeting, vinyl covered wall board, Masonite®, cement asbestos board, metal, glass, plastic, gypsum mortar beds or other unstable substrates. Improperly cured or wet plywood, particle board or strip wood are not suitable substrates. When latex admixtures is used, installations that will be continually wet like swimming pools, fountains and gang showers, the completed installation should be cured a minimum of 14 days and allowed to dry before exposure to water. For white or light colored marbles use 700 Premium Set White mortar. Some dimensional stone tile like resin backed, black, green and red marbles may warp when installed with water or latex based setting materials. These water sensitive stone tiles should be installed with Merkrete Pro Epoxy. For use of 700 Premium Set over additional substrates or situations not mentioned in these instructions, contact Merkrete Technical Services.
700 Premium Set
Professional Grade Portland Cement Thin Set Mortar

Cleaning: Water is all that is needed to remove any uncured mortar from tiles, tools and equipment.

6. Availability
Merkrete 700 Premium Set is available at leading tile houses and construction distributors. Contact Merkrete or visit our web site for the name of the nearest dealer at www.merkrete.com.

7. Warranty
5 year, 10 year and Limited Lifetime warranties are available. Contact Merkrete Technical Services or visit our web site for specific warranty information. Merkrete warrants that this product meets applicable ANSI standards in force at the time of manufacture.

8. Maintenance
None required, but installation performance and durability may depend on properly maintaining products supplied by other manufacturers.

9. Technical Services
Merkrete Systems maintains technical field representatives available throughout the country. Call Technical Services at 800-226-2424 for the nearest representative.

10. Filing Systems
Merkrete architectural product information available either in catalog form, or electronically on our website at www.merkrete.com.
